

ASX RELEASE – 14 March 2006

Medical Claims to Funds in Australia Live

The THELMA private patient medical claims (specialists, pathology, radiology) service is now live.

There are over 10 million of these claims in the market, and most of our current health fund customers are already connected to the service and awaiting volume. There has also been an encouraging amount of interest from healthcare providers in sending their claims electronically through THELMA.

The first partner to go live on this service is a registered billing service that performs the billing on behalf of over 200 specialists.

Mr Tim Murray, Managing Director of ICSGlobal said "As well as generating immediate revenue for ICSGlobal, this new service is strategically important as it strengthens our credentials for the recent Medicare Australia Response for Information (RFI)"

ICSGlobal's half yearly results will be released on 16 March 2006.

Released by: ICSGlobal Limited. For further information or media inquiries:

About ICSGlobal and THELMA

Founded in 1990 as an engineering and IT consultancy, ICS Group listed on the Australian Stock Exchange as ICSGlobal Limited in 1999 [ASX:ICS]. Since 2000, ICSGlobal's core business has been the unique "any-to-any" health industry clearing house technology **THELMA** (**T**ransactional **H**ealth **E**xchange **L**inking **M**ultiple **A**pplications), which ICSGlobal built, owns and operates. THELMA creates interoperability between the broad range of new and legacy software systems that typically exist in health systems. This enables health industry business partners in any country to conduct financial, clinical and administrative transactions electronically over the Internet. In Australia, THELMA's customer base continues to grow steadily, now standing at over 60% of private health insurers, 35% of private hospitals, 22% of public hospitals on the east coast, plus is connected into the national Medicare system for member checks and electronic claims. THELMA went live in the UK in July 2005 and has been certified to operate in the US following successful completion of a Proof of Concept in November 2005.
