

ASX RELEASE – 26 June 2006

HCN Connects to THELMA

Health Communication Network Limited ('HCN'), Australia's leading provider of clinical and practice management software for GPs and Specialists, has signed an Electronic Transaction Services Agreement with ICSGlobal to work cooperatively to use THELMA to provide electronic transaction services to HCN's customer base.

Over 16,500 doctors, representing 85 per cent of computerised GPs and over 1,350 Specialists, use HCN's Medical Director software to care for their patients during the consultation. HCN is also the leader in practice management software with about 3,500 general practice and specialist sites. HCN's iRIS radiology information system offers an advanced solution to the radiology practices. HCN's customer bases are supported by the industries largest software and customer service teams.

HCN's clinical applications focus on improving patient outcomes by providing evidenced based software tools to health care professionals at the point of care. Through its practice management applications, HCN is able to improve the efficiency of the business side of primary care practices.

HCN is also national leader in providing over 80 per cent of Australia's major hospitals with comprehensive collections of reputable online knowledge resources sourced from around the world.

The Services Agreement with ICSGlobal initially covers electronic hospital claims. Other types of financial or clinical transactions for doctors may be added into the Agreement in the future, for example other types of claims and payments services, diagnostic requests and results, hospital discharge notices and Electronic Medical Records.

About ICSGlobal and THELMA

Founded in 1990 as an engineering and IT consultancy, ICS Group listed on the Australian Stock Exchange as ICSGlobal Limited in 1999 [ASX:ICS]. Since 2000, ICSGlobal's core business has been the unique "any-to-any" health industry clearing house technology **THELMA** (Transactional Health Exchange Linking Multiple Applications), which ICSGlobal built, owns and operates. THELMA creates interoperability between the broad range of new and legacy software systems that typically exist in health systems. This enables health industry business partners in any country to conduct financial, clinical and administrative transactions electronically over the Internet. In Australia, THELMA's customer base continues to grow steadily, now standing at over 60% of private health insurers and over 40% of national private hospital beds. THELMA also processes claims into the national Medicare system. THELMA went live in the UK in July 2005. Plans for the rollout of THELMA in the US are being developed with a number of organisations, after THELMA was certified to operate in the US in November 2005.
